

Typical Applications

The HMC213MS8(E) is ideal for:

- LTE/4G/WiMAX Infrastructure
- Base Stations and Repeaters
- Private Land Mobile Radio (PLMR)
- ISM, Maritime & SatCom Terminals
- Microwave and Military Radios

Features

- Excellent LO to RF Isolation: 40 dB
- Excellent 2x2 Spurious Suppression: -71 dBc
- Low Conversion Loss: 8 dB
- No DC Bias & No External Matching Required
- Ideal for Upconversion & Downconversion
- MSOP8 SMT Package, 14.8 mm²

General Description

The HMC213MS8(E) is a wideband double-balanced mixer in an 8 lead plastic surface mount package. This fully integrated MMIC mixer is fabricated in a GaAs MESFET process and requires no DC bias and no external matching components. The HMC213MS8(E) mixer integrates Schottky diode mixing elements and on-chip balun transformers to deliver excellent isolation from LO to RF and from LO to IF. The wide IF bandwidth of DC to 1.5 GHz enables this mixer to be used in a wide range of general purpose applications including upconverters, downconverters, biphase modulators, demodulators, and phase comparators. The HMC213MS8(E) operates with LO drive levels as low as +10 dBm, and exhibits excellent 2x2 spurious suppression for demanding downconversion applications.

[2] Circuit Board Material: Rogers 4350

The circuit board used in the application should use RF circuit design techniques. Signal lines should have 50 Ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
