General Description

The HMC605LP3 / HMC605LP3E are versatile, high dynamic range GaAs MMIC Low Noise Amplifiers that integrate a low loss LNA bypass path on the IC. The amplifier is ideal for WiBro & WiMAX receivers operating between 2.3 and 2.7 GHz and provides 1.1 dB noise figure, 20 dB of gain and +31 dBm output IP3 from a single supply of +5V @ 74 mA. Input and output return losses are 14 and 15 dB respectively with no external matching components required. A single control line (Vctl) is used to switch between LNA mode and a low 2 dB loss bypass mode and reduces the current consumption to 10 μ A. The HMC605LP3 is failsafe and will default to the bypass mode with no DC power applied.

[2] Circuit Board Material: Rogers 4350 or Arlon 25FR

The circuit board used in the final application should use RF circuit design techniques. Signal lines should have 50 ohm impedance while the package ground leads and exposed paddle should be connected directly to the ground plane similar to that shown. A sufficient number of via holes should be used to connect the top and bottom ground planes. The evaluation circuit board shown is available from Hittite upon request.
