Description

The AM42-0007 is a three-stage MMIC linear power amplifier in a lead-free, ceramic bolt down style hermetic package. The AM42-0007 employs a fully matched chip with internally decoupled gate and drain bias networks and an output power detector. The AM42-0007 is designed to be operated from a constant voltage drain supply.

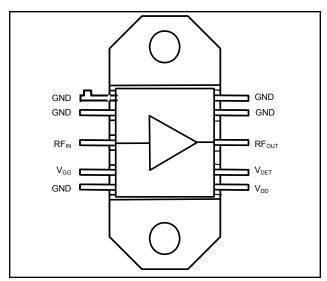

The AM42-0007 is designed for use as an output stage or a driver, in applications for VSAT systems. This design is fully monolithic and requires a minimum of external components.

The AM42-0007 is fabricated using a mature 0.5 micron GaAs MESFET process. The process features full passivation for increased performance and reliability. This product is 100% RF tested to ensure compliance to performance specifications.

- 1. Exceeding any one or combination of these limits may cause permanent damage to this device.
- M/A-COM Technology does not recommend sustained operation near these survivability limits.
- 3. Case Temperature $(T_C) = +25^{\circ}C$.

Typical Bias Configuration^{4,5,6,7,8}

- 4. Nominal bias is obtained by first connecting -5 volts to pin 4 ($V_{\rm GG}$), followed by connection +9 volts to pin 6 ($V_{\rm DD}$). Note sequence.
- RF ground and thermal interface is the flange (case bottom). Adequate heat sinking is required.
- 6. No DC bias voltage appears at the RF ports.
- For optimum IP3 performance, the V_{DD} bypass capacitors should be placed within 0.5 inches of pin 6.
- Resistor and capacitors surrounding the amplifier are suggestions and not included as part of the AM42-0007.
