EMI9404

PRAETORIAN® III 4-Channel EMI Array with ESD Protection

ON Semiconductor®

http://onsemi.com

Description

The EMI9404 is an inductor−based (L−C) EMI filter array with ESD protection, which integrates four filters in a UDFN package with 0.40 mm pitch. Each EMI filter channel of the EMI9404 is implemented with the component value of 1.8 pF−35 nH− 4.7 pF−35 nH− 6 pF. The cut−off frequency at −3 dB attenuation is 300 MHz and can be used in applications where the data rates are as high as 160 Mbps, while providing greater than −35 dB attenuation over the 800 MHz to 2.7 GHz frequency range. The parts include ESD diodes on every I/O pin and provide a high level of protection against electrostatic discharge (ESD). The ESD protection diodes connected to the external filter ports are designed and characterized to safely dissipate ESD strikes of ±14 kV, which is beyond the maximum requirement of the IEC61000−4−2 international standard.

This device is particularly well suited for wireless handsets, mobile LCD modules and PDAs because of its small package format and easy−to−use pin assignments. In particular, the EMI9404 is ideal for EMI filtering and protecting data and control lines for the LCD display and camera interface in mobile handsets.

The EMI9404 is housed in space saving, low profile, 0.40 mm pitch UDFN packages in a RoHS compliant, Pb−Free format.

Features

- Four Channels of EMI Filtering with Integrated ESD Protection
- ±14 kV ESD Protection (IEC 61000−4−2, contact discharge) at External Pin
- Greater than −40 dB Attenuation (typical) at 1 GHz
- UDFN Pb−Free Package with 0.40 mm Lead Pitch: 4−ch. = 8−lead UDFN
- UDFN Package Size: 8−lead: 1.70 mm x 1.35 mm
- Increased Robustness Against Vertical Impacts During Manufacturing Process
- These Devices are Pb−Free and are RoHS Compliant

Applications

- LCD and Camera Data Lines in Mobile Handsets
- I/O Port Protection for Mobile Handsets, Notebook Computers, PDAs etc.
- EMI Filtering for Data Ports in Cell Phones, PDAs or Notebook Computers
- Wireless Handsets
- Handheld PCs/PDAs
- LCD and Camera Modules

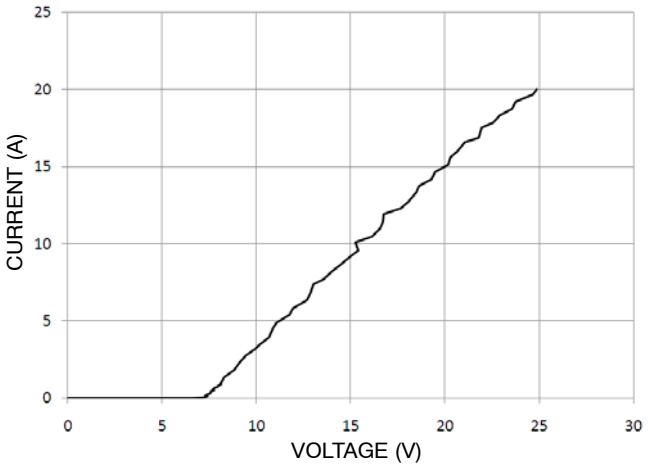

Figure 4. Positive TLP I–V Curve

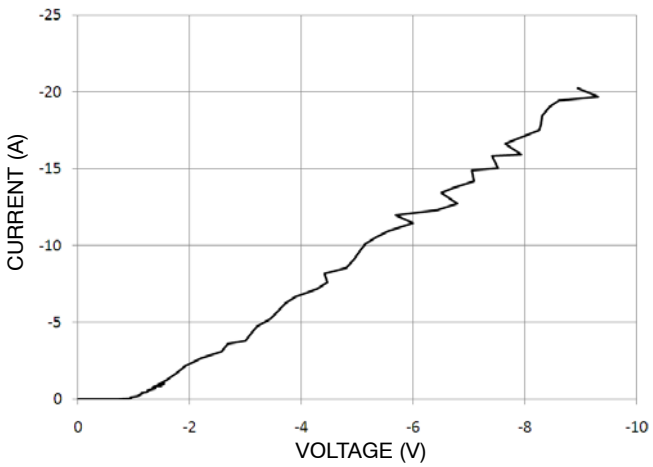

Figure 5. Negative TLP I–V Curve

Transmission Line Pulse (TLP) Measurement

Transmission Line Pulse (TLP) provides current versus voltage (I–V) curves in which each data point is obtained from a 100 ns long rectangular pulse from a charged transmission line. A simplified schematic of a typical TLP system is shown in Figure 6. TLP I–V curves of ESD protection devices accurately demonstrate the product's ESD capability because the 10s of amps current levels and under 100 ns time scale match those of an ESD event. This is illustrated in Figure 7 where an 8 kV IEC 61000–4–2 current waveform into a short is compared with TLP current pulses at 8 A and 16 A, also into a short. A TLP I–V curve shows the voltage at which the device turns on, as well as how well the device clamps voltage over a range of current levels. Typical TLP I–V curves for the EMI9404 are shown in Figures 4 and 5 for positive and negative stress respectively. Application note AND9007/D gives more detail on TLP datasheet parameters, while application note AND9006/D provides a more complete explanation of the use of TLP for understanding protection product characteristics.
