

Package Style: QFN, 16-Pin, 0.9mm x 3mm x 3mm

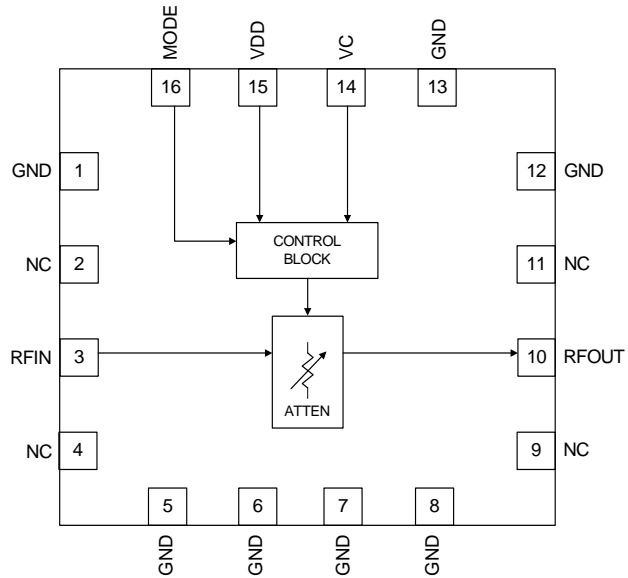

Features

- Patent Pending Circuit Architecture
- Broadband 50MHz to 6000MHz Frequency Range
- 30dB Attenuation Range
- +50dBm IIP3 Typical
- +80dBm IIP2 Typical
- High 1dB Compression Point >+30dBm
- Low Supply Current 1mA Typical
- 5V Power Supply
- Linear in dB Control Characteristic
- Internal Temperature Compensation
- Class 1C ESD (1000V)
- 3.3V Version Available (RFSA2023)
- Complete Solution in a Small 3mm x 3mm, QFN Package

Applications

- Cellular, 3G Infrastructure
- WiBro, WiMax, LTE
- Microwave Radio
- High Linearity Power Control

Product Description

RFMD's RFSA2013 is a fully monolithic analog voltage controlled attenuator (VCA) featuring exceptional linearity over a typical temperature compensated 30dB gain control range. It incorporates a revolutionary new circuit architecture to solve a long standing industry problem: high IP3, high attenuation range, low DC current, broad bandwidth and temperature compensated linear in dB control voltage characteristic. This voltage controlled attenuator is controlled by a single positive control voltage with on chip DC conditioning circuitry. The slope of the control voltage versus gain is selectable. The RFSA2013 draws a very low 1mA current and is packaged in a small 3mm x 3mm QFN. This attenuator is matched to 50Ω over its rated control range and frequency with no external matching components required. Typical VCA's in this performance category have poor inherent attenuation versus temperature and poor nonlinear attenuation versus control voltage characteristics. To correct these shortcomings, other VCA's require extensive off chip analog support circuitry that consume valuable PCB area and additional DC power. This game changing product incorporates the complete solution in a small 3mm x 3mm QFN package that reduces the footprint by 20X in area and reduces the DC power by 10X over conventional PIN diode approaches.

ESD Rating Human Body Model (HBM)	1000	V

Caution! ESD sensitive device.

Exceeding any one or a combination of the Absolute Maximum Rating conditions may cause permanent damage to the device. Extended application of Absolute Maximum Rating conditions to the device may reduce device reliability. Specified typical performance or functional operation of the device under Absolute Maximum Rating conditions is not implied.

Pin Names and Descriptions

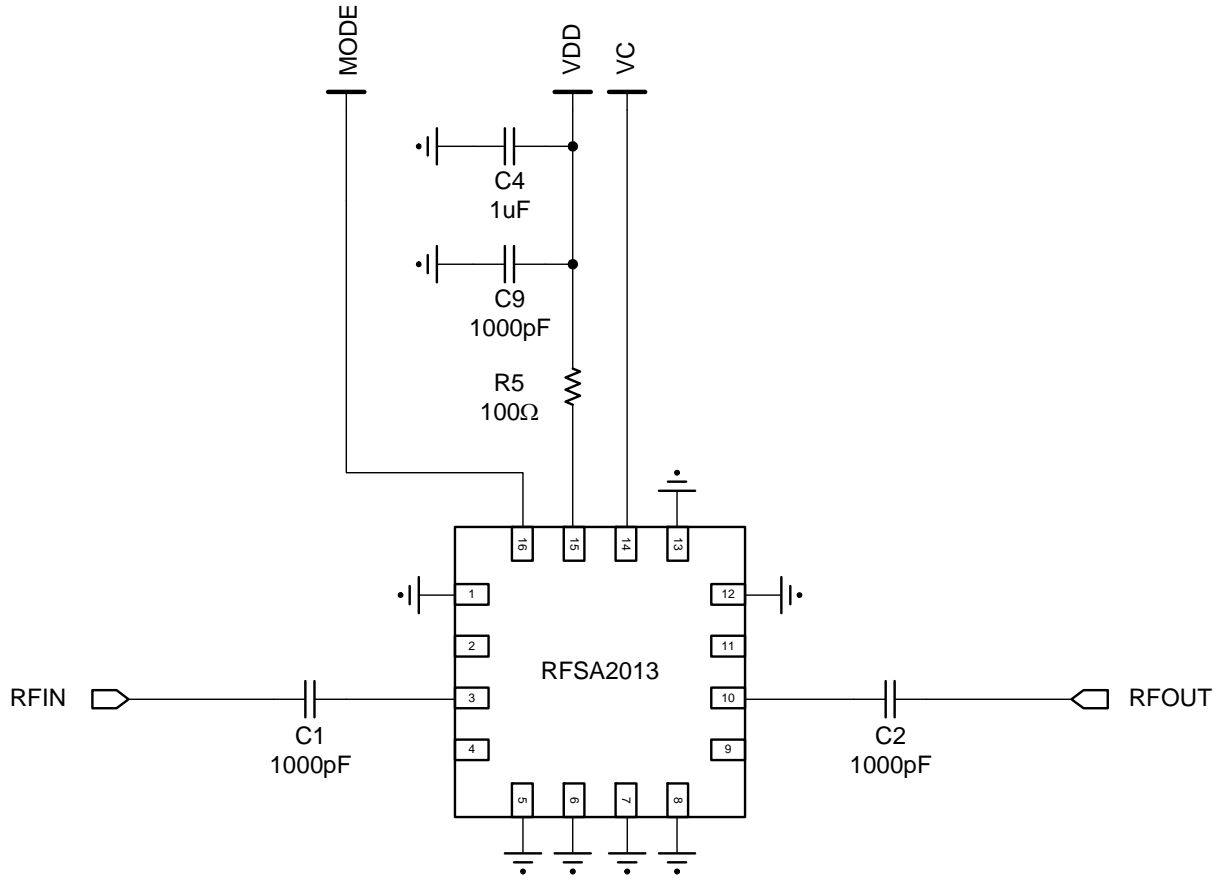

Pin	Name	Description
1	GND	Ground Pin
2	NC	No Connection. Do Not Connect to PC Board Ground Plane.
3	RFIN	RF Input. Use External DC Block. RF input must be this pin to insure linearity and thermal resistance specifications.
4	NC	No Connection. Do Not Connect to PC Board Ground Plane.
5	GND	Ground Pin
6	GND	Ground Pin
7	GND	Ground Pin
8	GND	Ground Pin
9	NC	No Connection. Do Not Connect to PC Board Ground Plane.
10	RFOUT	RF Output. Use External DC Block. RF output must be this pin to insure linearity and thermal resistance specifications.
11	NC	No Connection. Do Not Connect to PC Board Ground Plane.
12	GND	Ground Pin
13	GND	Ground Pin
14	VC	Attenuator Control Voltage
15	VDD	Supply Voltage (5V)
16	MODE	Attenuation Slope Control Set to Logic Low to Enable Negative Attenuation Slope. Set to Logic High to Enable Positive Attenuation Slope.
GND	GND	Exposed Package Ground Paddle is RF and DC Ground

PCB Patterns

Thermal vias for center slug "C" should be incorporated into the PCB design. The number and size of thermal vias will depend on the application, the power dissipation and the electrical requirements. Example of the number and size of vias can be found on the RFMD evaluation board layout.
