### Description

The ST6-EMU2 provides you with all you need to develop and debug programs for ST6 microcontrollers.

STMicroelectronics' ST6-EMU2 emulators are cost-effective solutions that provide both high quality, emulation and programming capability to support ST6 application development.

Emulators are delivered with WGDB6, which allows debugging of ST6 applications using a Windows PC as the user interface.

Windows Epromer allows the user to program application code in the ST6 EPROM.
